

Physics 221B
Spring 2020
Unhomework 27
Nothing Due

Reading Assignment: Notes 47, Secs. 12–17, Notes 48, entire.

In the last lecture on Thursday, April 30, we started on material from Notes 49, but the material covered by the final exam ends with Notes 48. Due to requests from many students I will continue at least one lecture next week, to cover the basics of hole theory and the second quantization of the Dirac field. None of this will be on the exam.

Here are some problems you might do to review the material from the last week of lecture: 47.2, 47.3, 47.4 and 48.2. These are for practice only, not to be turned in.
